

Exercícios: Razão Áurea.

1) Encontre o valor de x para o qual a função $f(x) = -x^3 + 9x - 3$ possui um máximo no intervalo de busca

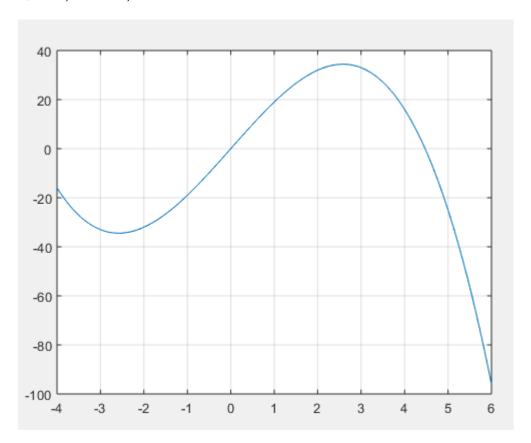

d= R(XU-Xl)
X1:XL+0
Xz xu -d

i	xl	f(xl)	x2	f(x2)	x1	f(x1)	xu	f(xu)	d
1	1		1382	6,7984	1,6180	7 3262	2	J	0,6180
2	1,3820		16180	7,3262	1.7639	7,3870	2	7	0,3819
3	1,6180		1,1639	1,38 10	1,854	7,3132	, 2	7	0,2360

 $\frac{x_{\text{máx}}}{(x_{\text{máx}})^{2}} = \frac{1,689}{1,389}$ 12 itanecous $\frac{1}{1,389} = 0,6180$ 2 $\frac{1}{1,389} = 0,2360$ 2 $\frac{1}$

2 of 4

2) Encontre o valor de x para o qual a função $f(x) = -x^3 + 20x$ possui um máximo no intervalo de busca $x_1 = 1$ e x_u=4. Faça três iterações.

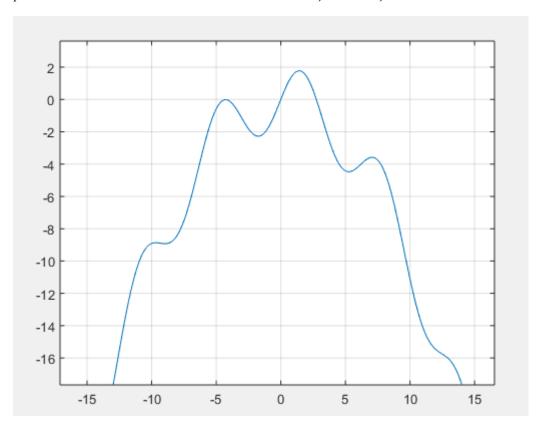

i x1 $f(x1)$ x2 $f(x2)$ x1 $f(x1)$ xu $f(xu)$ d 1 1 19 2,146 33,031 2,1540338323 4 16 1,854 2 2,146 33,037 2,5541 33,5313 3,2918 30,1666 4 16 1,1456 3 2,146 33,037 2,5837 34,462,8542 32,5327 3,2918 30,1667 0,7081										
2 2,146 33,037 2,8642 33,8723 3,2918 30,1666 4 16 1,1456	i	xl	f(xl)	x2	f(x2)	x1	f(x1)	xu	f(xu)	d
	Λ	1	19	2,146	33,031	2,5540	338 323	4	16	1,854
3 2,146 33.037 2.5837 34, 406(2.8542 32.5327 3.2918 30,1667 0.7081	2	2,146	33,037	2854)	33573	•	२ <i>०,1</i> 6 66	4	16	1.1456
	3	2,146	33.037.	2,5837				3,2918	30,1662	0.7081

Xmax= f(xmáx)=

Xmax = 2,5837) f(xmax)=34,4265

3) Encontre o valor de x para o qual a função $f(x) = 2sen(x) - x^2/10$ possui um máximo no intervalo de busca $x_1=1$ e $x_u=2$. Faça três iterações.

i	xl	f(xl)	x2	f(x2)	x1	f(x1)	xu	f(xu)	d
1	1	1,5829	1,3820	1,7735	1,6180	1,7360	2	1,4156	0,618
2	1	1,5829	1,2361	1,7362	1,3827	1,77.35	1,6187	1,7360	0,3319
3	1,2361	1,7362	1,3820	1,7735	1,4721	1,2736	1,6180	1,7360	0,2360

Xmáx= f(xmáx)=
